Numerical Simulation Analysis

Bongjung Sung

2026-01-18

We provide the summary of the numerical simulations under partial-isotropy core covariance model (see Section 7.1 for details).

```r
################ Libraries

library(tidyverse)
```

```
## -- Attaching core tidyverse packages ----------------------- tidyverse 2.0.0 --
## v dplyr     1.1.4      v readr     2.1.6
## v forcats   1.0.1      v stringr   1.6.0
## v ggplot2   4.0.1      v tibble    3.3.0
## v lubridate 1.9.4      v tidyr     1.3.1
## v purrr     1.2.0
## -- Conflicts ------------------------------------------ tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

```r
library(latex2exp)

################ Loading the simulation results
file.list=list.files(path="./numerical.simul_picore",pattern=".rds")
file.list=file.list[-c(1:4)]

for(i in file.list){
  load(paste("./numerical.simul_picore/",i,sep=""))
}

################ Utensils

```

boxplots of the relative spectral norms for K, C, and Sigma across 100 iterations
under different choices of the sample size n and the value of non-spiked eigenvalue λ.
K

```r
K.analy.16.12.3.lambda1=plot.K.analy(fit.16.12.3.24.lambda1,fit.16.12.3.48.lambda1,fit.16.12.3.96.lambda
